Dear Ms. Staiger,

I am a second generation Staten Islander and have seen our forests chopped, our waters polluted and our land degraded by irresponsible and/or ignorant business interests and people. We cannot continue to ignore the role that nature must play in the sustenance of our existence on this planet. There is no carpet under which to sweep the toxic soil at the White lead site in Port Richmond, Staten Island. It is the EPA's responsibility to prevent the potential poisoning of our residents. Please remove this poison and all tainted soil in its entirety by choosing Alternative B to clean up this toxic site.

Thank you.

Sincerely,

Peggy Guzzetta
